

# Clean Energy Fuels American Energy Dominance

Clean energy is American-made energy that strengthens the United States' energy independence. Producing and using domestic clean energy sources, like wind and solar, expands the US' domestic energy fleet and reduces our dependence on foreign countries to meet our energy needs. By providing a limitless source of homegrown power, clean energy is a vital part of America's national security and energy dominance.

## Local Power Generation

By generating power locally, the US has greater energy security, more stable energy costs, and economic benefits that stay here at home:

➤ Diversifying our energy mix with home-grown, clean, affordable energy employs Americans with family-supporting jobs.

➤ Decreases our reliance on foreign nations and our vulnerability to geopolitical tensions.

➤ Provides economic opportunities for American farmers and rural communities.

**Growing our clean energy industry is a great way to build energy independence and strengthen our national security in the US.**

# Clean Energy Brings American Economic Growth

**\$744 billion**  
in investment

**\$3.2 billion**  
**annually**  
in landowner  
revenue

**\$3 billion**  
**annually**  
in tax revenue

---

**\$750.2 billion**

in combined annual revenue and total investment

## THE BOTTOM LINE

**Clean energy strengthens our economy, protects our national security, and powers our nation forward.**
